

Because of the use of devices in work it is easier to work at home or be self-employed and work from home

collaboration/sharing makes working easier by doing projects with others and getting said projects completed quicker

less secure, reduced speed, can become disorganised, disconnected through black-spots.

They are scalable, flexible and require limited setup.

## IMPACT OF MODERN TECHNOLOGY

accessibility needs for people who need it

businesses now need to communicate with the new generation via social media and internet

made it possible for organisations to connect devices when they are needed

## AD HOC NETWORK

A wireless network that does not rely on fixed hardware such as routers in wired networks.

now normal for workers/students to have modern devices or be given them.

# everything we've learnt

Examples:

- Personal Area Network (PAN)
- Open WiFi / Free WiFi
- Tethering or personal hotspot
- Bluetooth

*This is fantastic homework!! we done it very impressed*

delivery of computing services

Applications that are online run by a remote server in the cloud.

can be accessed anywhere via internet

kept in data centres

users can access and share online on any device via the internet

## CLOUD, STORAGE, COMPUTING

it is a database.

managed by information security teams

cost effective, no installation needed, employees all run the same version of software from the cloud and updates/maintenance carried out by service provider

e.g. iCloud, dropbox, Google Cloud
